## Subject: Application for Associate Data Engineer Position

Dear Hiring Manager,

I am writing to apply for the Associate Data Engineer position at Abacus Insights. I recently completed my Bachelor's degree in Computer Science, and I am eager to begin my career in data engineering by contributing to a team that builds impactful, scalable data solutions—especially within the healthcare domain.

I have developed a strong foundation in SQL and Python through both academic work and personal projects. During my final year project, I worked with data processing and system development, where I applied structured problem-solving, debugging, and optimization techniques. I am particularly interested in building and maintaining data pipelines, and I am actively learning tools such as PySpark and modern data platforms to align my skills with industry requirements.

I am comfortable working with data workflows, identifying inefficiencies, and improving system performance. I also have experience working in a collaborative environment using Agile methodologies, where clear communication and adaptability were essential to delivering project goals.

What excites me about this opportunity at Abacus Insights is the chance to work on data solutions that directly contribute to improving healthcare outcomes. I am motivated to grow as a data engineer while contributing to building reliable, secure, and high-quality data systems.

I am a quick learner, detail-oriented, and committed to continuously improving my technical and professional skills. I would welcome the opportunity to discuss how my background and enthusiasm can contribute to your team.

Thank you for your time and consideration.

Sincerely,
**Manogya Bajracharya**
